Lee Ang Xuan, Lee Kai Rong, Low Yu Xuan, Jason Ong Jia Xi

How to run our project:

Run all the codes in `final_model.ipynb` to test our final model which is our softmax regression.

If you would like to try out other models too, you can look into our `all_model_selection.ipynb`. Then, run the libraries importing code chunk and respective model code chunk.

If you are interested in looking into our cleaning process of data, you can look into `clean.ipynb`.

Then, if you are interested in looking into the feature selection and extraction part, you can look into `feature_selection_and_extraction.ipynb`.

Do note all the libraries are up to date before running the codes. You can check the requirements text file for the versions of the libraries.
